

ERP System Implementation Project (Odoo)

Watan Designs Limited, Kingdom of Saudi Arabia

Training Manual & Implementation Guide by:

Dubai in Cairo Ltd.

For Digital Marketing and eCommerce Services

Odoo CRM & Sales Module (Chapter 01)

Release date: November 2025

Project Manager

Eng. Abdalla Hassan Elfouly

Configuration Team

Mr. Ibrahim Mohamed Saad

Mr. Moataz Mohamed Mostafa

Production Consultant

Eng. Amr Abdel-Mottaleb

1.0 Customer Relationship Management (CRM) System and Sales Management System

1.1 Introduction and Objectives

- The Odoo CRM system is designed to manage the complete lead and opportunity lifecycle, from the very first contact through to the final conversion into a sales order. Its primary goal is to equip our factory's sales and customer service teams with the tools necessary to efficiently handle the entire customer journey. This system also features a practical integration with the factory's day-to-day operations.
- The Odoo Sales system manages all sales-related processes, from creating quotes to issuing sales orders and final invoices, with a direct link between sales staff, inventory, and accounting to ensure accurate order fulfillment and real-time data updates. The system aims to streamline the sales process and improve sales team efficiency by fully automating the sales cycle.

Why do we need these specific two modules in our factories?

- Consolidate all order reception channels (such as WhatsApp, phone calls, in-person visits, exhibitions, and social media) into a single, unified system.
- A clear view of the daily follow-up list for each sales employee.
- Improving the conversion rate from inquiry to sale, and reducing missed opportunities.
- Providing accurate data to support production and inventory planning based on current and projected demand.

How does this module interact with other odoo modules?

Once an opportunity is confirmed, the sales process triggers several integrated steps across the system:

1. A price quote is generated in the Sales module.
2. This quote is converted into a confirmed sales order.
3. The sales order updates the Inventory and Purchasing modules to reflect the demand.
4. Finally, this demand cascades through the Manufacturing module and other relevant modules.

1.2 Basic Terms and Concepts

Term	Translation	Practical Explanation
Lead (Prospect)	عميل محتمل أو استفسار مبدئي	Initial inquiry without qualification. Example: A client calls asking about a bedroom for the new house.
Opportunity (Potential Deal)	فرصة بيعية أو صفقة محتملة	Qualified sales opportunity with valuable information. For example: budget, size, or date.
Pipeline (Sales Funnel)	خط المبيعات أو رحلة العميل	Sales Stages Panel Columns or Kanban View
Sales Stage (Sales Phase)	مرحلة بيعية خطوة في مسار الفرص	Sales Stage Column Example: receipt, qualification, inspection, pricing, or negotiation.
Next Activity (Upcoming Task)	النشاط القادم أو إجراء المتابعة	For example: call, visit, pricing, follow-up A specific date must be set.

Probability (Success Rate)	احتمالية الفوز أو نسبة النجاح	Odoo determines the likelihood of closing a deal for each stage using a predefined set of criteria.
Opportunity Result Won / Lost	نتيجة الصفقة فوز / خسارة	Closing the opportunity by winning or losing with an explanation of the reason for the loss.
Partner Business (Account)	شريك تجاري	Contact Person or Company Example: client, contractor, or consultant.

1.3 Sales Pipeline Design

Order	Stage	Goal	Explanation
1	New Lead (شخص مهتم)	Receiving Inquiry and registering contact data	Access Channel Documentation + Brief description
2	Qualification (تأهيل)	Gathering basic information such as Area, Material, and Budget.	The qualification form has been completed, and expectations are clarified.
3	Site Visit (معاينة)	Scheduling and documenting an inspection with visit details and address.	Inspection Report Uploading Site Images
4	Design & BOQ (تصميم وكشف بنود)	Preparing a preliminary plan and estimating of materials.	Sample Initial Items + Internal Trust

5	Quotation (تسعير)	Issuing a price quote with payment and delivery terms.	Price Quotation + Discount Percentage (If Applicable)
6	Negotiation (تفاوض)	Discussion of implementation details such as Price, colors, and specifications.	Negotiation Summary + Discount Percentage Update
7	Won (فوز)	Customer Approval The deal was successfully closed.	Convert to a Final Sales Order + Recording Recommendations
8	Lost (خسارة)	Closing the Opportunity with documented reasons	A Specific Reason + Explanation of details

1.4 Probability Model

This model is used to estimate the probability of a sales opportunity being won at each stage of the sales funnel. The further the opportunity progresses through the funnel, the higher the probability of winning, helping management to more accurately forecast revenue and prioritize follow-up.

In the Odoo system, this probability is automatically calculated for each stage and can be adjusted based on the team's assessment. Below is an example of one probability distribution model:

- At the qualification stage, the probability of winning is 20%, because it is just a preliminary information gathering stage.
- At the inspection stage, the probability rises to 35%, as the transition is made from a general inquiry stage to a real project that is examined in the field.

- In the design and item disclosure phase, the percentage rises to 55%, as the specifications are precisely defined and demonstrate the client's serious intent.
 - At the pricing stage, the probability reaches 70%, because the customer now has a clear offer and is being evaluated.
 - During the negotiation phase, the probability reaches 85%, as the project is about to close and only the final details remain to be agreed upon.
 - Finally, at the winning stage, the probability reaches 100%, meaning that the deal was successfully completed and the sales order was officially created.
-

1.5 System Operating Procedures (Step-by-Step)

A. Creating a new lead

1. Select the CRM icon, then Pipeline, then "Add Lead".
2. Entry: Name, Phone, Channel, Area of Residence, Project Type.
3. Assigning the lead manager according to Geographical location, priority, or specialization.
4. Specify the next activity, such as a call within 24 hours. (Tuesday, 21 October, 5:00 PM)

B. Qualification

- Key questions:
 - Approximate dimensions? Preferred material? Budget? Delivery date?
 - Is a site visit required?
- Updating fields and changing the stage to Qualification.
- If available, attach the plan and direct the request to the design department.

C. Scheduling a client visit

- From the opportunity card: Schedule a meeting
 - Add location + access notes.
-

- After the visit: RegisterLog NoteIn a brief report, and attach photos.

D. Preparing a design and preliminary list of items

- Send the data to the designer for extraction Initial Bill of Material (BOM).
- Internal cost approval (Production Manager).
- Update the opportunity for the stage "Design & BOM".

E. Issuing a Price Quotation

- From the opportunity: create a price quote → It will automatically move to the sales module.
- Filling out the offer items: specifications, quantities, payment terms, and delivery time.
- Send the PDF offer to the customer via Odoo's WhatsApp.
- Returning to the opportunity and changing the stage to "Quotation".

F. Negotiation and Closure

- Record every negotiation call as an activity.
- To modify the offer: Go to the Sales module → Select Update Price Offer.
- Upon approval: Move the customer card to the "Win" column → then confirm the price offer
- The offer now automatically turns into a final Sale Order
- The data automatically goes to the "Finance Module" to create an invoice with the same details.

1.6 Key Performance Indicators (KPIs)

Index	Meaning	Calculation Method	Goal
Conversion Rate (معدل التحويل)	Conversion rate from potential customer to confirmed sales order.	Number of winning deals divided by total number of opportunities.	$\geq 25\%$
Avg. Cycle Time (متوسط وقت دورة المبيعات)	Average Opportunity Closing Time	Date Of Winning – Date Of Creation	≤ 21 days
Activity SLA (اتفاقية مستوى الخدمة)	Standard of commitment to the activity within a standard period	Activities carried out on schedule $\div$ Total Activities	$\geq 90\%$

1.7 Frequently Asked Questions (Faq)

Q: When does a potential customer (lead) turn into a sales opportunity (opportunity)?

A: When basic qualification data (budget, size, date, material) is available + a real probability of sale.

Q: Can a customer be converted directly to a price quote without going through the qualification stages?

A: This is not recommended, because the lack of qualification weakens pricing accuracy and increases the likelihood of losing the deal later.

Q: When is a trade closed as a "Lost"?

A: When the client confirms that they will not proceed with the project or will choose another supplier, the reason for the loss is documented within the system for future analysis.

Q: What is the benefit of recording activities within each opportunity?

A: It helps track the history of communication with the customer (calls, visits, offers, feedback), and also ensures continuity of follow-up without loss of information.

1.8 Data Entry Rules (Data Hygiene)

1. Do not leave the phone number field blank.
 2. Always set up an upcoming activity before leaving the card.
 3. Clear labeling of the opportunity: (Project, Type, Size/Number, Client Name).
 4. Attachments: Add the images immediately.
 5. The phase should be updated on the same day.
 6. You have to use activity alerts.
 7. Do not neglect to document the cause of the loss.
-

1.9 Salesperson Daily Checklist

- Review of the sales pipeline interface panel.
 - Implement and update activities.
 - Contact opportunities that have exceeded the Service Level Agreement (SLA) standard.
 - All pipeline stages must be updated before the end of the workday.
-
