

ERP System Implementation Project (Odoo)

Watan Designs Limited, Kingdom of Saudi Arabia

Training Manual & Implementation Guide by:

Dubai in Cairo Ltd.

For Digital Marketing and eCommerce Services

Odoo Human Resources Module (Chapter 05)

Release date: November 2025

Project Manager

Eng. Abdalla Hassan Elfouly

Configuration Team

Mr. Ibrahim Mohamed Saad

Mr. Moataz Mohamed Mostafa

Production Consultant

Eng. Amr Abdel-Mottaleb

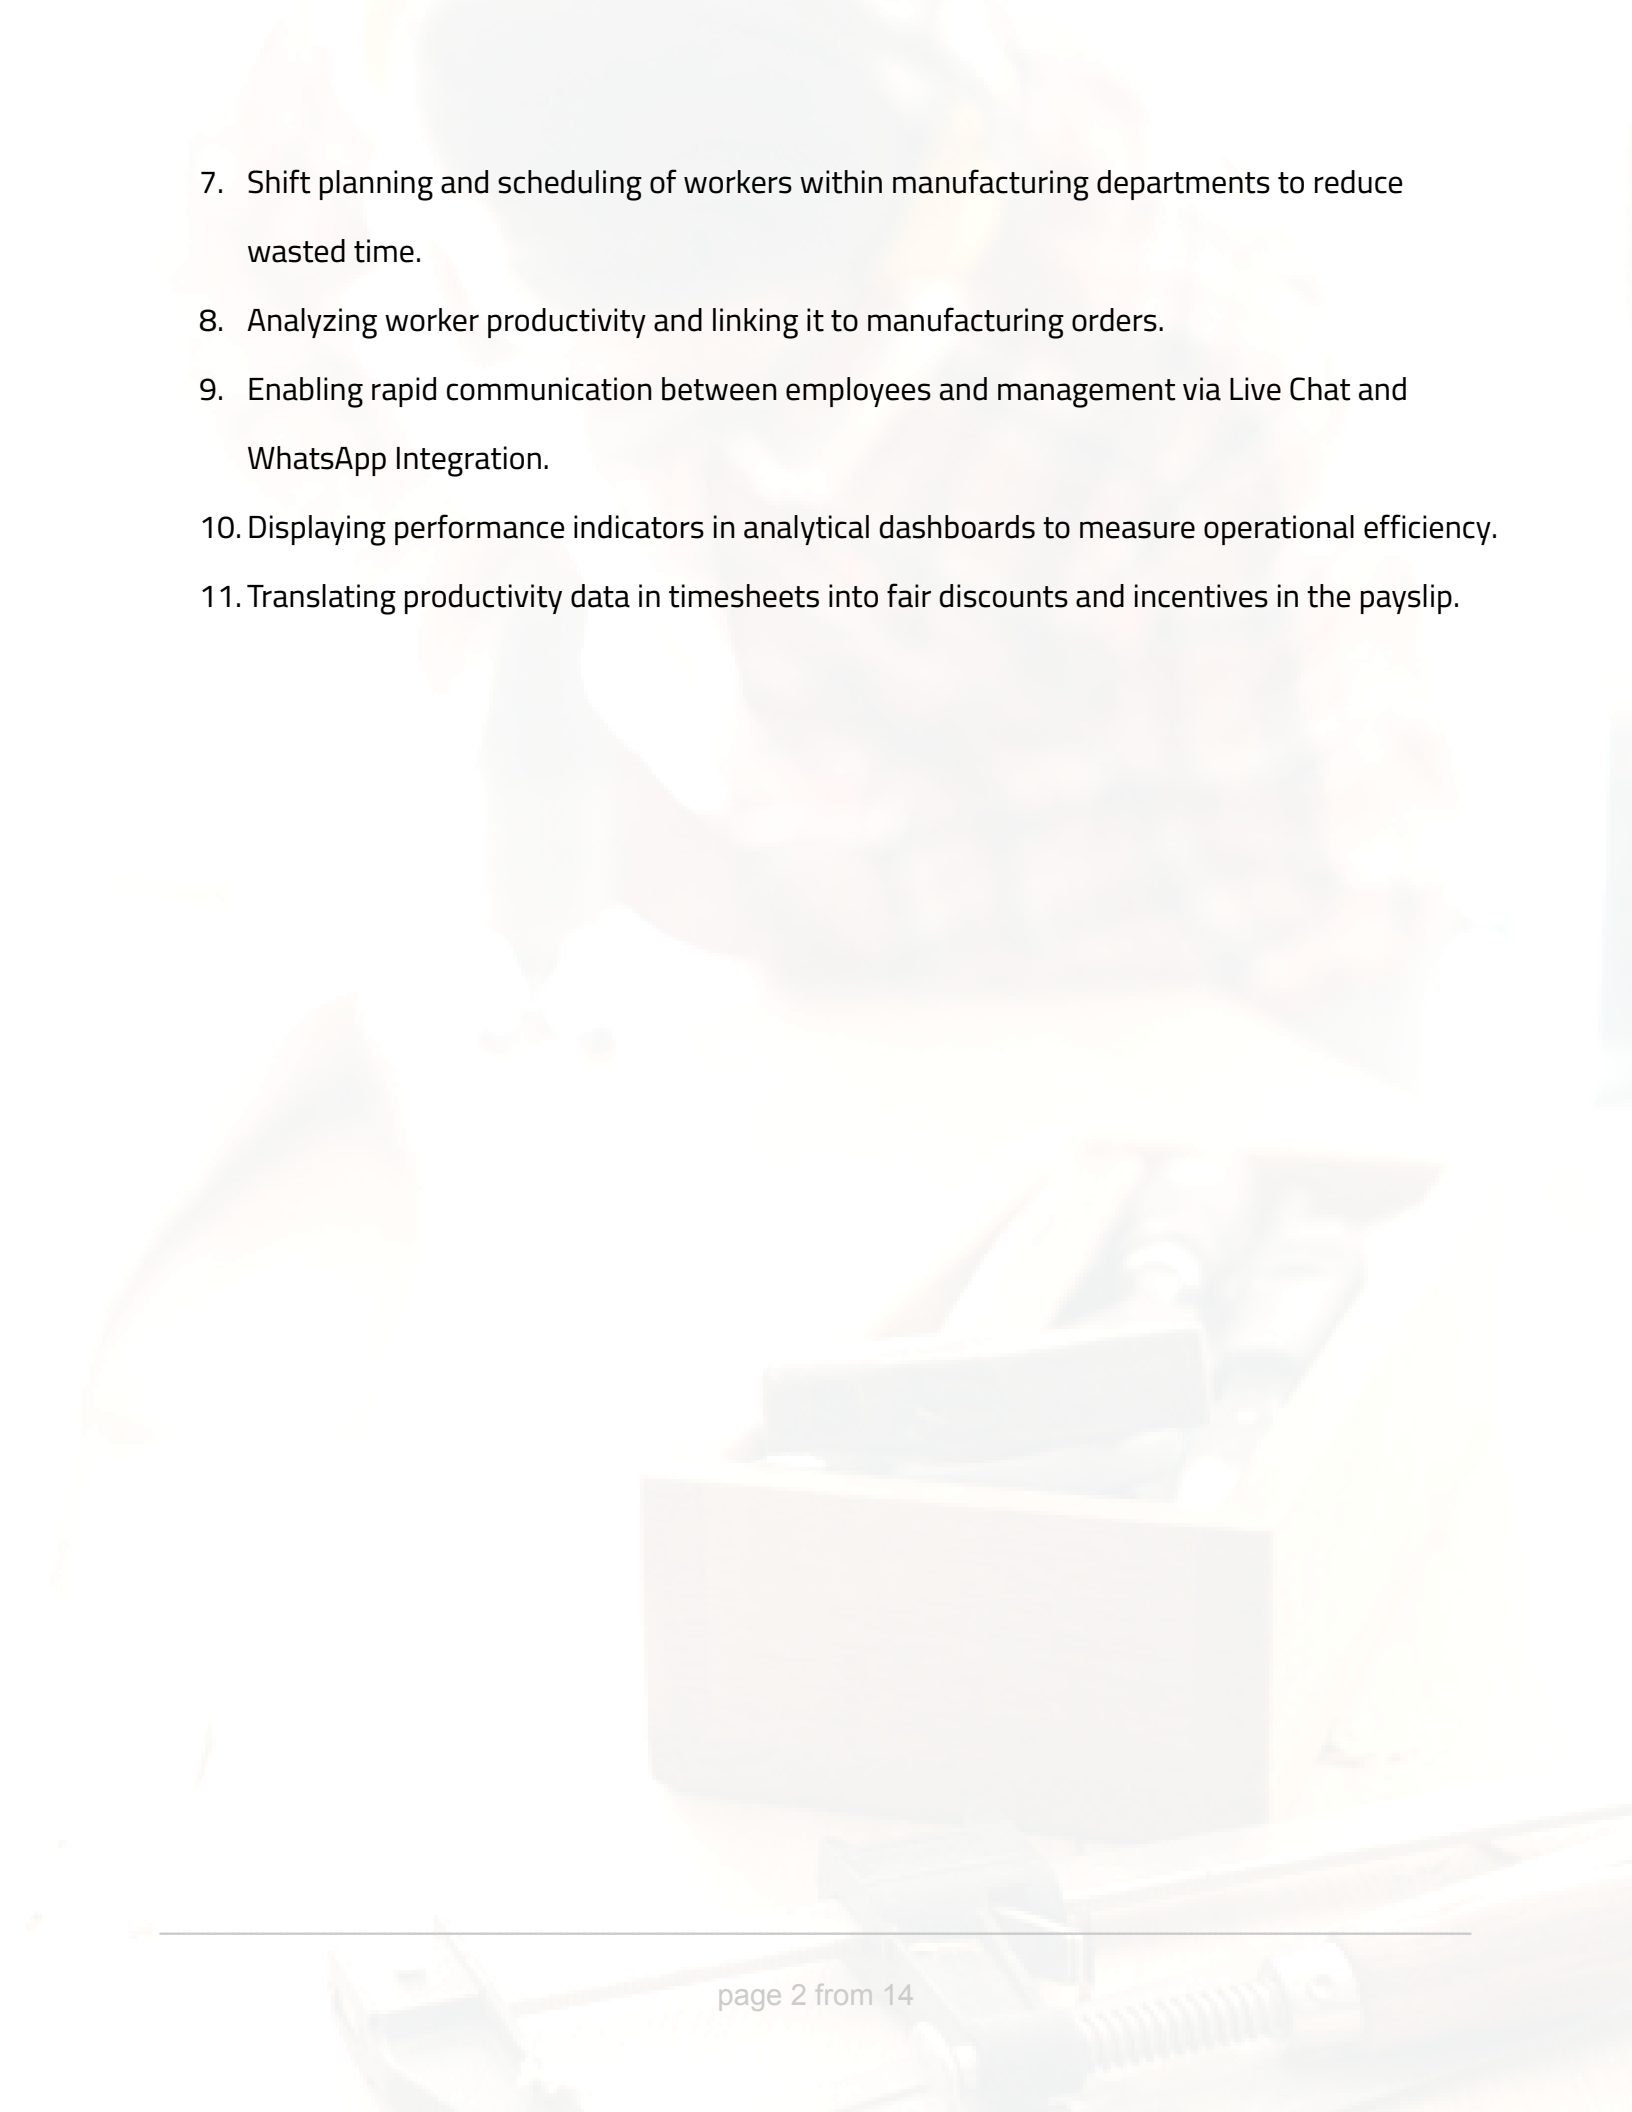

5.0 Human Resources Management

5.1 Introduction and Objectives

The Odoo Human Resources Management System is an essential operational asset, especially for industrial settings. It provides a structured and integrated platform for managing HR functions, from the initial recruitment phase through to employee termination. Our work implementing HR systems in manufacturing environments has highlighted the module's crucial function in accurately determining operating costs, as every minute of labor spent in the factory directly correlates to a quantifiable and traceable production expense.

HR Module Objectives:

1. Creating a unified central database that includes all employees in the three factories.
2. Organizing employee contracts, financial documents, and job-related information within the system in an automated and secure manner.
3. Monitoring attendance and departure and linking it effectively to fingerprint devices and smart cards.
4. Managing leave and approvals through clearly defined electronic procedures.
5. Calculating salaries automatically and linking them to the accounting module.
6. Evaluate employee performance according to measurable quantitative and qualitative indicators.

- 
7. Shift planning and scheduling of workers within manufacturing departments to reduce wasted time.
 8. Analyzing worker productivity and linking it to manufacturing orders.
 9. Enabling rapid communication between employees and management via Live Chat and WhatsApp Integration.
 10. Displaying performance indicators in analytical dashboards to measure operational efficiency.
 11. Translating productivity data in timesheets into fair discounts and incentives in the payslip.

5.2 Basic Terms and Concepts

Term	Translation	Practical Explanation
Employee (Staff Member / Worker)	الموظف أو العامل	The person registered in the system is affiliated with the organization and is linked to a specific department, job, and contract.
Contract (Employment Agreement)	عقد العمل أو الاتفاق الوظيفي	An official document that includes details of salary, type of employment, validity period and financial benefits.
Attendance (Presence Log / Check-in & Out)	الحضور والانصراف أو سجل التوقيع	A system for tracking entry and exit times through fingerprint and smart card, to measure discipline.
Leave (Time Off / Vacation Request)	الإجازة أو الغياب المصرح به	It is an official procedure submitted by the employee and approved digitally, and the days are automatically deducted from his balance.
Timesheet (Work Log / Time Record)	سجل الساعات أو كشف الوقت	It documents the actual number of hours worked on a specific project or production order for performance analysis.
Payroll (Payslips)	كشوف المرتبات أو سجل الرواتب	A system for calculating and disbursing salaries, bonuses, and deductions, and linking them to the accounting module.
Appraisal (Performance Evaluation)	تقييم الأداء أو مراجعة الأداء	A periodic evaluation process aimed at measuring employee efficiency and linking it to incentives and promotions.

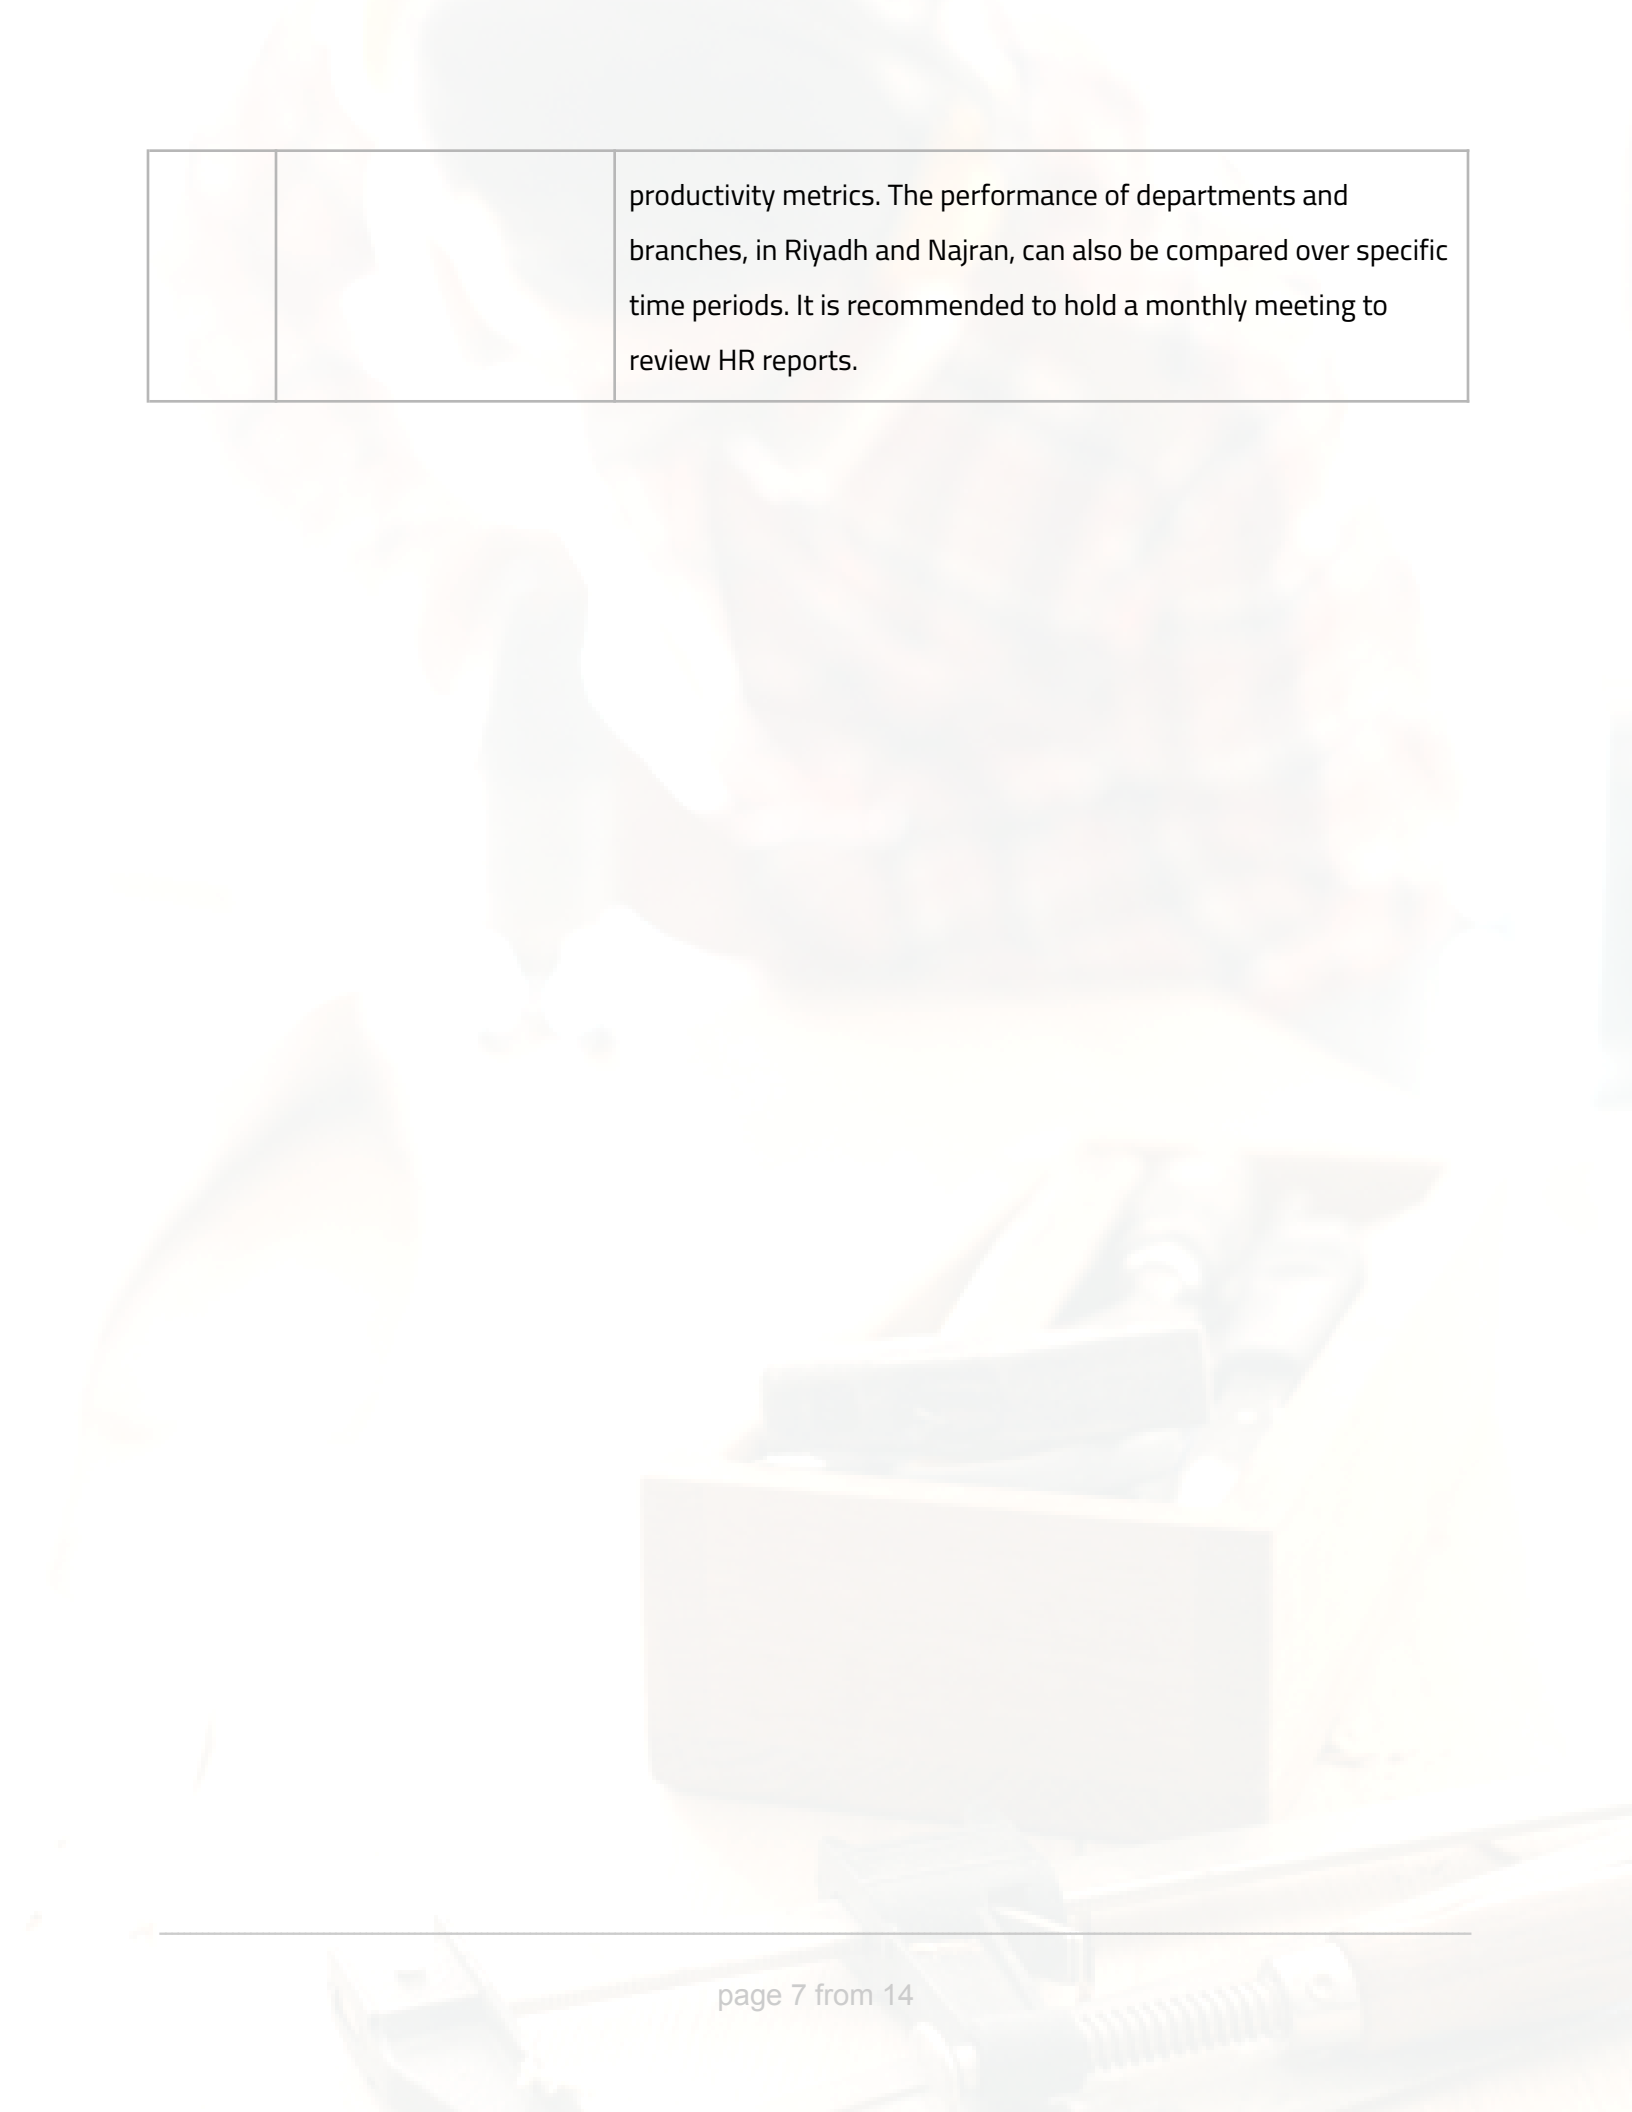

Planning (Shift Scheduling)	تخطيط الورديات أو جدولة الموارد البشرية	A tool for distributing daily and weekly shifts and organizing coverage within production departments.
Fleet (Vehicle Management)	إدارة المركبات أو تنظيم الأسطول	A system for registering and maintaining company vehicles and linking them to drivers.
To-Do (Tasks List / Activities)	قائمة المهام أو المهام اليومية	A list that helps employees manage their daily work and keep track of what has been accomplished.
Appointments (Interview Scheduling)	نظام المواعيد أو مقابلات العمل	Job interview booking and scheduling feature for administrative meetings.
Professional Contacts (Business Directory)	جهات الاتصال أو دليل الاتصال	A record of people and entities associated with the organization, including employees, partners, and suppliers.
Live Chat (Internal Instant Messaging)	المحادثة الفورية أو الدعم اللحظي	A direct communication channel between employees used for daily support and interaction.
WhatsApp Integration	تكامل واتساب أو الربط بتطبيق واتساب	An integrated channel for communicating with employees quickly and securely from within the system, but through WhatsApp.
Phone Integration (VoIP / Call Center)	التكامل الهاتفي وربط الاتصالات	The feature is to record and document administrative calls in an integrated manner with employee files.
Analytics Dashboard (Reporting Panel)	لوحة المتابعة أو المؤشرات التحليلية	The factory dashboard includes employee statistics (attendance, leave, performance level, and other KPIs).

5.3 The Work Cycle Within The HR System

Odoo's human resources system is designed to cover the employee lifecycle from the moment they join the organization until the end of their service, and ensures integration between the operational, administrative and accounting departments.

Stage	Activity	Clarifications and Executive Experience
1	Recruitment and Data Registration	The system cycle begins with the receipt of a job application or appointment request. The candidate's data is then entered into the system along with all details (job title, department, salary). It is recommended to link this stage to the "Recruitment" module in the future to track the selection and appointment process.
2	Preparing the Employment Contract	The contract is the primary document that links the employee's financial and operational data to the other modules. The type of contract (permanent, temporary, or probationary) is specified and directly linked to the salary rules.
3	Activating Attendance and Departure	Once an employee is activated, they are linked to a fingerprint scanner. Work locations are pre-entered into the system so that attendance hours are recorded for each factory separately. This data is then used to calculate productivity and operating costs for labor on each production line.
4	Leave and Approvals Management	The employee submits the leave request from within the system via the "Time Off" interface. The request then undergoes an approval process from the production manager to the general manager of the factory. The system is configured to automatically apply company policies (number of annual leave days, accrued leave balance, unpaid leave).

5	Recording Hours and Productivity	Daily working hours are recorded via "Timesheets". This module allows for the calculation of the actual time spent on each task or manufacturing order, and its comparison with the planned time. This data feeds into operational efficiency reports and is used to compare and improve the performance of production departments.
6	Payroll Preparation	Once attendance, hours, and leave records are complete, the system automatically generates monthly payrolls. Allowances, overtime, deductions, and withholdings are calculated according to predefined rules. The statements are sent for approval by the financial manager, after which automatic accounting entries are created in the general ledger.
7	Periodic Performance Evaluation	Performance appraisals are conducted every three months using the "Appraisals" module. Data is collected on attendance and productivity. The results of the evaluation are used in making decisions regarding promotions or rewards.
8	Shift Planning and Work Organization	The planning process is managed through the "Planning" module, which allocates workers to daily or weekly shifts. This step is essential in a manufacturing environment to avoid overlap between workers and ensure efficient and sustainable production.
9	Internal Communication and Real-Time Reporting	Through Live Chat and WhatsApp Integration, real-time communication is facilitated between HR and supervisors on-site. The system documents important conversations and calls within the employee's file to ensure proper administrative follow-up. This feature enhances decision-making speed and reduces response time to daily issues.
10	Performance Analysis and Reporting	Reports are generated from the dashboards to illustrate attendance rates, leave entitlements, working hours, and

		productivity metrics. The performance of departments and branches, in Riyadh and Najran, can also be compared over specific time periods. It is recommended to hold a monthly meeting to review HR reports.
--	--	--

5.4 Human Resources System Operating Procedures (Step-by-Step)

A. Registering a new employee

1. Access the Employees list and then select "Create" to add a new employee.
2. All basic data is entered, including department, contact information, date of appointment, and a personal photo.
3. The record is saved, so the employee becomes active in the system and can be linked to any contract, department or project.

B. Preparing the employment contract

1. The employee card is opened and the New Contract option is selected.
2. The contract details are entered, such as the basic salary, allowances, contract type, and start and end dates.
3. After reviewing the terms, the contract is saved and activated in the "Running" status.
4. It is advisable to create pre-made contract templates to standardize wording and legal standards.

C. Attendance and Departure Management

1. The attendance system is activated via the "Attendance" interface, which is used through fingerprint devices.
2. When attendance or departure is recorded, the record is updated in real time within the system.
3. Attendance reports allow viewing the attendance, lateness, and early departure rates of employees in each department.

D. Leave Management

1. From the "Time Off" menu, a new leave request is created that specifies the type and duration of the leave.
2. The system automatically sends notifications to both the production manager and the factory manager for review and approval.
3. After approval, the approved days are deducted directly from the employee's balance and reflected in the payslip.

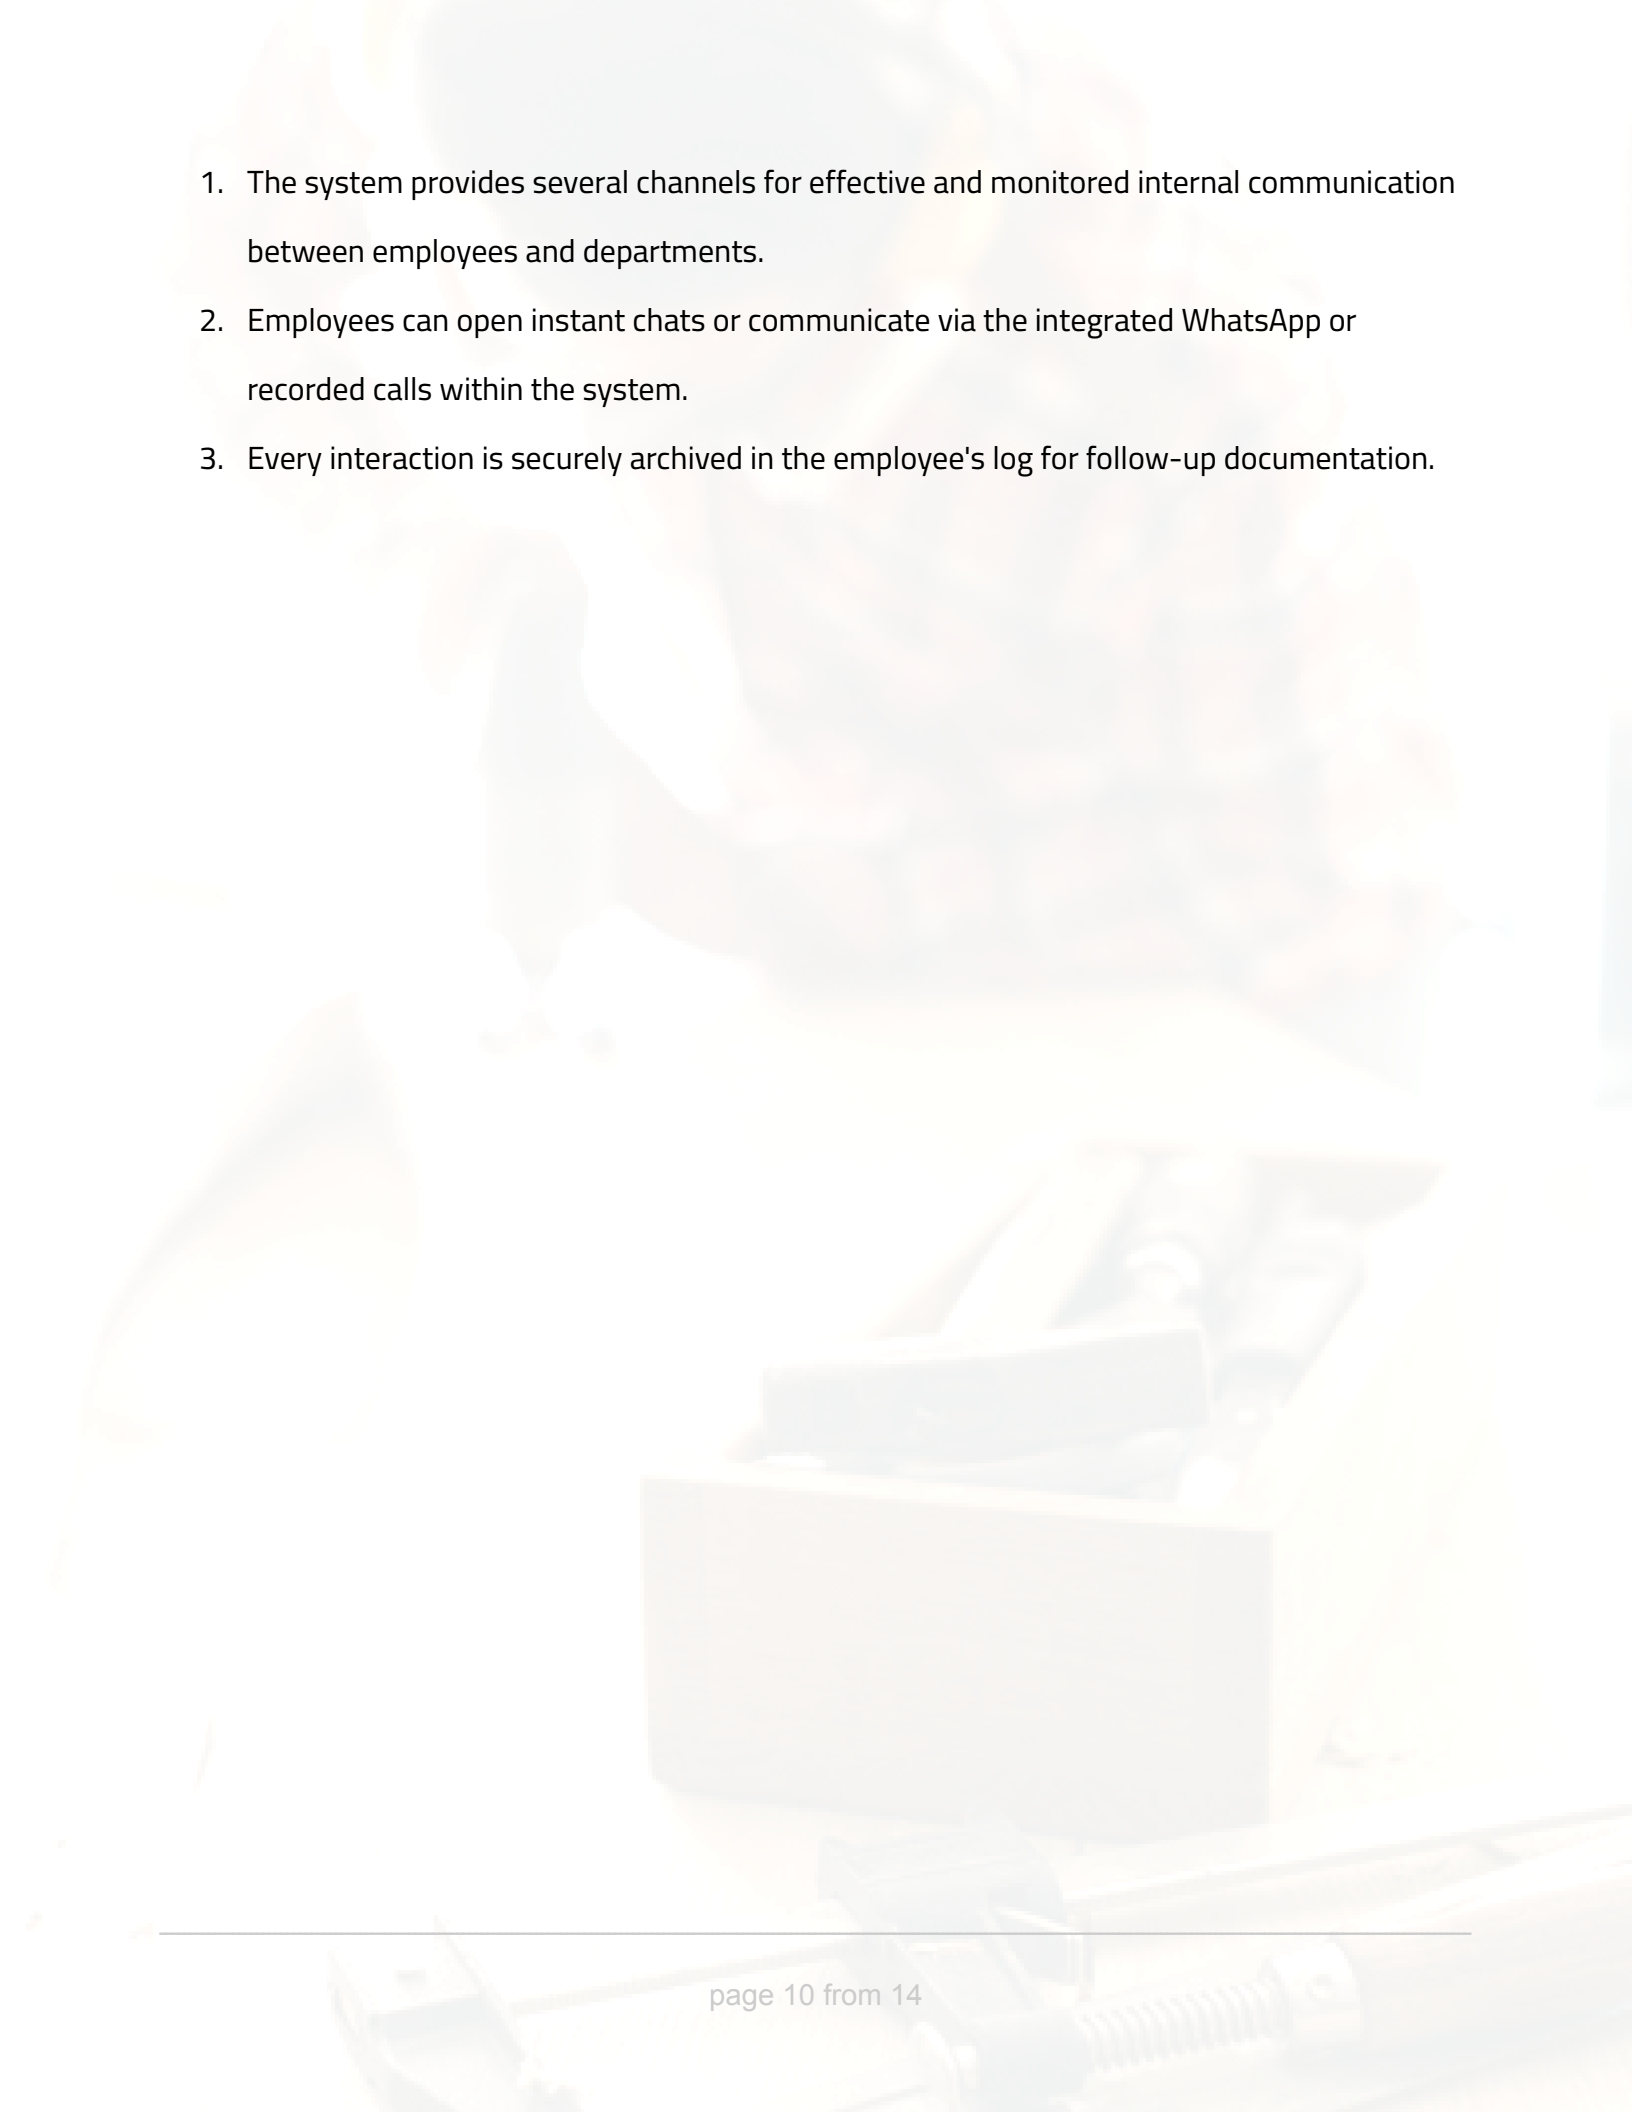

E. Payroll issuance

1. Access the payroll menu and select "Periodic Payslips" or "Batch Payslips".
2. The month or period is specified so that salaries are automatically calculated based on hours, holidays and active contracts.
3. After reviewing and approving the statements, the system creates automatic accounting entries within the general ledger.
4. It is best to activate the double-check feature to ensure the accuracy of the data before sending it to the finance department.

F. Performance Appraisal

1. The time period for evaluation is determined, and measurement elements such as discipline and productivity are entered.
2. After filling out the form, it is sent to the factory manager for review, then the result is approved and recorded in the employee's record.
3. The results are used to improve training, motivation, and individual performance development.

G. Internal Communication Channels

- 
1. The system provides several channels for effective and monitored internal communication between employees and departments.
 2. Employees can open instant chats or communicate via the integrated WhatsApp or recorded calls within the system.
 3. Every interaction is securely archived in the employee's log for follow-up documentation.

5.5 Best Practices for Implementing an HR System in a Manufacturing Environment

1. **Connecting workers to work centers:** Every worker in the factory must be registered as a user in the system linked to some specific work centers within the production lines, allowing the true operating cost of each product to be calculated through the actual time taken by the worker.
2. **Performance analysis via Timesheets:** The hours spent by the worker in each production process are recorded and linked to manufacturing orders, and then the differences between the planned time and the actual time are analyzed to discover the causes of waste or slowness.
3. **Smart shift management:** It is preferable to create shifts using the planning module, specifying daily periods and linking them to work centers. This helps ensure full coverage of operations and production departments without overlap or staffing shortages.
4. **Incentive and penalty system:** Key performance indicators (KPIs) can be linked to salaries so that automatic bonuses are added when targets are met, or penalties are deducted when absence or error rates are exceeded. This can be activated through “automation commands” within the system.
5. **Integration with accounting and manufacturing:** It is recommended to link salaries directly to the finance module to accurately calculate labor costs and link recorded hours in “Timesheets” with manufacturing reports to evaluate production efficiency.

5.6 Key Performance Indicators (KPIs)

Index	Translation	The equation	Target
Attendance Rate (Percentage)	معدل الحضور أو الالتزام الزمني	$(\text{Days Attended} \div \text{Actual Working Days}) \times 100$	$\geq 95\%$
Payroll Accuracy (Salary Precision)	دقة حساب الرواتب	$(\text{Number of correct statements} \div (\text{Total statements}) \times 100$	100%
Leave Response Time (Approval Duration)	زمن اعتماد الإجازات أو سرعة الموافقات	Average time between Request and approval	≤ 24 hours
Appraisal Coverage	نسبة تنفيذ تقييمات الأداء	$(\text{Number of assessments carried out} \div (\text{Total}) \times 100$	$\geq 90\%$
Overtime Ratio (Extra Hours Rate)	نسبة الساعات الإضافية أو العمل فوق الوقت	$(\text{Total overtime hours} \div (\text{Total working hours}) \times 100$	$\leq 10\%$

5.7 Frequently Asked Questions (FAQ)

Q: Can an employee monitor their record from their phone?

A: Yes, through the Odoo HR app, the employee can track attendance, leave and salary directly.

Q: Can the system be linked to the old fingerprint device?

A: Yes, attendance data can be imported from any device via a CSV file or API integration.

Q: What is the difference between Timesheets and Attendance?

A: Attendance measures an employee's time in attendance, while Timesheets measure the actual time an employee spent performing a specific task.

Q: Can the rewards be calculated automatically?

A: Yes, by setting up "Salary Rules" and linking them to performance or productivity results.

5.8 Data Preparation and Application Rules

- All employees must use their official email address for registration.
 - Departments and job titles must be standardized before data entry.
 - Review the contracts, their dates, and salaries carefully before activating them.
 - Ensure that duplicate entries for employees in the system are prevented.
 - Verify that each employee is linked to the correct cost center.
 - It is necessary to enter the employee's complete data, including the name as in passport.
 - Update shifts and attendance weekly after approval by the factory manager.
-

5.9 The Human Resources Employee's Daily Checklist

1. Review attendance and departure reports from the Dashboard.
 2. New leave requests will be approved after verifying the availability of the balance.
 3. Updating daily shifts in the Planning module.
 4. Monitoring any changes in contracts or salaries.
 5. Communicate with departments via Live Chat to update special cases.
 6. Reconciling approved payrolls with accounting before monthly closing.
-
